The Water Resources Utility of the Future

Water information is fundamental to national and local economic well-being, protection of life and property, and effective management of the Nation's water resources. The USGS works with partners to monitor, assess, conduct targeted research, and deliver information on a wide range of water resources and conditions including streamflow, groundwater, water quality, and water use and availability.

Water Resources - usgs.gov

To strengthen water security we need to build capacity, adaptability, and resilience for the future planning and management of water resources. Water Resources Management (WRM) is the process of planning, developing, and managing water resources, in terms of both water quantity and quality, across all water uses.

It includes the institutions, infrastructure, incentives, and information systems that support and guide water management.
